Customer Testimonials for the DPE and DPE X™ Devices

An interview with Billy Bond on Permaculture Food Production, Off-Grid Living, and the DPE X Devices. Click here to watch.

September 2026

****

Hi Richard,

I am quite astonished at the results in less than two weeks. The skies above are much clearer. I can see the curve of influence in the clouds. The jet trails don't seem to have much staying power. The general feeling of the area is improved (the vibe). The air feels much sweeter in my nose.

I have noted a 40% reduction in the radon level in one specific area already.

I can hardly wait to see what it will do to help the generally dying pinyon forest at 7800 ft. elevation. Stressed due to drought and beetle infestation. I decided to go ahead and get another for my remote property.

More people should get and install them.

When I was first thinking of buying this unit, I wanted my neighbors to pitch in on the purchase. Tough sell. Now I think these devices are something of a gift for nature. I think the benefits I receive will more than compensate me (and my nearby neighbors) for the likely failing US script I traded for them. They are likely worth their weight in gold, maybe more if they perform all the benefits claimed.

It would be an interesting project to see where these all are located. It is likely a bad idea to publish that as they are fighting the climate and Earth poisoning agenda. No sense making it easy on the globalists to find and destroy these beautiful creations.

Thanks,
Gary B
66-year-old Retired Master Electrician/Electrical Contractor, hopefully extended survivor.

A new DPE Agriculture X testimonial:

After getting the device installed and watered in, what I saw was amazing. The clouds started to part, and within two hours, I had beautiful blue skies above our farm. Probably just a coincidence, but after the clouds parted, five military helicopters flew directly over the farm right through the blue area that had formed. Also, watching the chemtrails break up and quickly dissipate has been hard to believe. But nonetheless – it's happening.

Thank you,
Mark C., June 2026

****

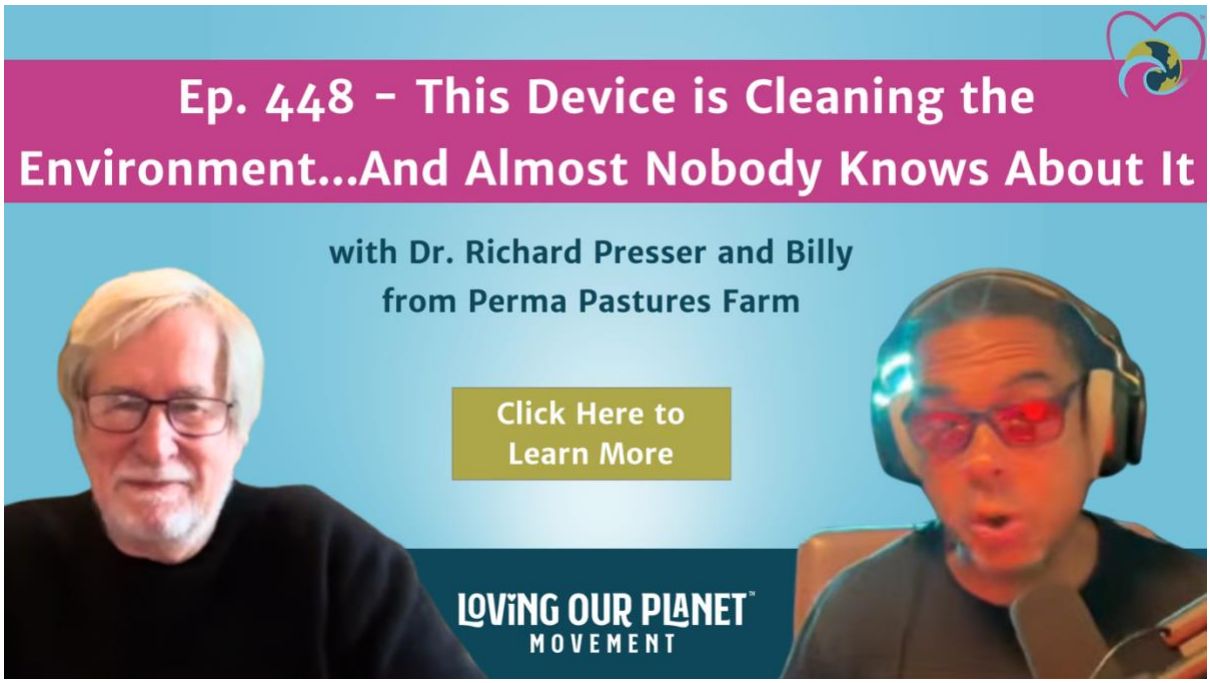
The DPE-100X is doing just what you said it would do. I love it. Late last month, Denver Intl Airport was shut down for several hours due to hail and wind. My house is just over 25 miles from DIA and we had just a big rain and no hail. We continue to have mild weather when everyone else has big storms.

Thank you,

Mike L., June 2026

****

Recent Interview on the DPE X Devices, June 2026



In this interview, Billy shares some of his early results with the DPE Agriculture X, which were so profound he has already ordered the larger model, the DPE Shield Agriculture X.

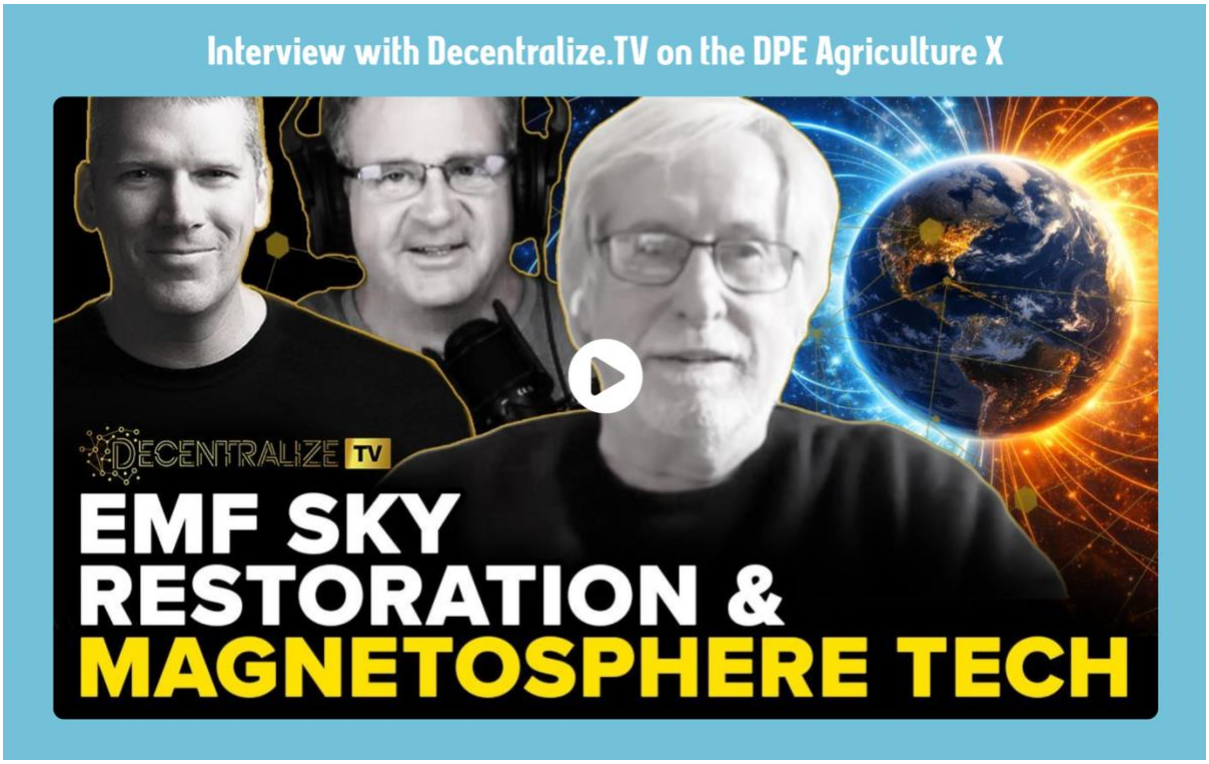
We also discuss how quickly the chemtrails cleaned up over his place, the South American Anomaly, the magnetic poles, negative ions, and much more.

****

Recent Interview on the DPE X Devices, April 2026

The developer of the DPE devices and I were interviewed by Mike Adams of Health Ranger fame and his partner on Decentralize TV, Todd Pitner. I believe we all felt it was the first step in an ongoing conversation about this extraordinary technology and its benefits to humanity.

You can watch it at https://brightvideos.com/play/vid-ed1e8a7a-8785-4646-946e-bd3af50b573d/index.html . It shares a great deal of background on this technology and a video testimonial from Todd sharing his experience of his recently installed DPE Agriculture X.



****

Kent E Leininger's DPE Agriculture X™ Testimonial

UPDATE 8-17-2025

The year has been somewhat dry, and the results for hay this year have resulted in an additional cutting nearly as large as the 1st and 2nd. The first two were approximately 59 ton baled and the 3rd, even with the dry weather, was approximately 50 ton. Normally past results have been very low for a 3rd cutting; however, this year things were improved.

Additionally, the east field of corn from my 14-acre property, was not looking quite as good early on, but has resulted in a good turn around in growth.

Garden results this year were extremely encouraging. Note that we have moved into using raised beds and incorporating compost from the Columbus, Ohio zoo for 2025. An irrigation system was installed and drip tape to keep garden watered. At this point, I'm not sure if the DPE was integral to our success or not, but based on results of plants in tomatoes, peppers, asparagus, herbs, strawberry plants, garlic and horseradish, this year was well over what was experienced in produce in our 2024 garden. Tomatoes 13 ounces to 1 pound plus, and grape tomatoes larger than last year with magnificent sweetness. Bell pepper and poblano peppers were consistent in size.

I have also introduced a glass greenhouse to the property for year-round growing of hydroponic vegetables. Looking forward to seeing what results may arise from that avenue of gardening after the first try and needing to address overheating by sunlight.

Overall, the storm dissipation appears to continue from our initial installation a year ago, and odor from the dairy farm still better than past. Milk output comparison has not been addressed, and may not be, based on younger son's management style vs the father. The third cutting on hay, being much larger than normal, has paid for the investment according to my brother-in-law (if the DPE was responsible for this larger than normal result). We cannot attribute it to anything else.

We have seen chemtrail reduction in the sky over our location; however, when they are seen, the break above us in the chemtrail is obvious. One can see a clean break in the sky above in the actual trail.

Storm cells have been monitored, and the red cells look to break up when nearing our area. This is a consistent occurrence and has created a peace of mind. Only God can truly protect us; however, with this addition to the farm,

after the devastating tornado in our area March 2024, the experience and further peace of mind, has been well worth the investment.

Kent E. Leininger, August 2025

****

A friend of mine showed me the DPE he has had for several years. It was the one prior to this new product improvement. Pictures of how a storm was affected were shared and I thought it prudent to purchase one. My wife grew up on the farm that my in-laws operate, which is a small 150+ animal dairy farm. My brother-in-law partnered with me in the purchase. He, too, is an engineer but on a much higher level of education in physics. We wondered how the claims were even possible, but thought we had both wasted good money on other things in our lives, and now that we are retired and semi-retired, why not one more thing. If it works, well, that's a benefit.

DPE Agriculture X with protective wooden frame

We were surprised to find our first experience was him noticing a feeling of improved health after having had a heart valve replacement earlier this year. Within a few days of installing it, my wife commented that she wasn't as tired at night when we sat down at the end of the day, and I actually realized that I was the same way.

We were very close to the F3 tornado that struck Lakeview, OH this past March, so protection from severe storms was my purpose for purchase. After a long dry spell in September, we had a pretty good size storm come through and when it came near to the protected area, the red in the radar parted and dissolved. I couldn't believe it.

Then the manure lagoon needed to be pumped this past week. Half had been pumped, and my in-laws noticed the smell was greatly reduced from prior times of pumping and spreading on the farm. We live on 14 acres of the 240-acre farm, and normally this would be spread around us on at least 2 of 3 sides within the farm block. I could sit on our swing, on the east side of the property, within 100 feet of the area used for this manure spread, and I could not detect the smell. Quite impressed. Then more was spread on the south side, further away (approximately 800 feet), but the wind was strong. Normally, I would not have been able to work in the garden due to the strong odor. Yesterday was different. Again, no smell.

Does this DPE work? Well, after seeing what it has done so far, we are anxious to see the production on the agricultural side. Soy beans were planted late and it got dry, so my in-law is anxious to see how production is this time. Over the past few years, he has seen 70-80 bushel production per acre with use of the manure from the cows. Others around us produce much less using conventional means. I do gardening, so next year I hope to see good results. I may have to do a new report then. 😊 We are quite happy so far. He is looking forward to milk production output as we monitor the next several months. The DPE Agriculture X was installed on August 8, 2024.

If you are interested in using this technology, I would suggest partnering with neighbors in your area to lessen the financial burden and look at the larger unit if possible. We were impatient after seeing the effect of the tornado to the area, and didn't want to wait for the production time of the DPE Shield Agriculture X (quoted leadtime is 90 days though typically it is about half of

that), even though neighbors were willing to provide the extra funds, so we opted to buy the one in stock.

I was impressed with the shipping time, as it came within a week of ordering. We pray others will see what we have experienced so far, and more.

Thank you for sharing the invention of Giovanni.

It's been quite dry here, but I watered my DPE and mulched over the wires' area. The storm tonight looks like it was dissipated as it got nearer to Jackson Center. We are 3 miles east of Jackson Center. Interesting.

Kent E. Leininger, September 2024

****

"I think it was about three years ago that I added the DPE100 to my backyard behind the middle of my home. I don't recall the exact year, but that's the basic timeframe.

A month ago, our area burned in one of these extreme fires that have occurred in California and other areas. My home was a mile West of the starting point of the fire, and the Santa Ana winds were as extreme as I've ever seen them. After the fire had gone through our neighborhood, my house and one just to the East of mine were the only ones standing on both sides of my block, and the neighbors lost their smaller outbuildings, their garage and a shed.

For my property, the fire basically stopped at the property line or just inside it, with the exception of one small area near the street where a smart meter was buried in the ground. There was no structural damage and minimal loss of vegetation and trees, despite the firestorm that must have engulfed the area at one point.

I'm a feng shui practitioner, so I did a number of things to the entire property and house which were designed to create enough coherence to help the area be less vulnerable to extreme weather, whether that be rains, wind, fire, or anything destructive.

I always felt that installing the DPE100 was one of the most important things that I did. From the moment I placed it in the ground, I could feel a palpable increase in harmony everywhere on the property. Ultimately, it's hard to say what worked in a situation like this. I also asked for protection before driving away from the place the night of the fire, and I felt it all around the house as soon as I asked for it. I feel like Grace is the biggest factor in saving the house and plants. But I am quite sure that learning about the DPE100 and being able to add it to the property was part of that Grace in the first place.

I thought you'd like to hear the story. People who have since come to the house, insurance adjusters and such, are amazed at the oasis of green my house is, in a sea of destruction of the surrounding neighborhood."

"All the trees in the foreground are my property. If you could see to the left, it would be a burnt-out shell. To the right and the entire end of the street plus the mountains in the distance, is all brown and burnt-out homes. Except for a few trees and one neighbor, my patch is the only normal area on the block. All the vehicles in the back are service vehicles looking through debris for one reason or another. You can see how brown everything is.

The second photo shows what's across the street from my house."

Holland Franklin, February 2025

Gil Gunter's DPE Agriculture Testimonial

Gil installed his DPE Agriculture in BC, Canada in April 2024.

The first thing that amazed him was that a large fruit tree his mother had planted years ago, which had never bloomed nor produced any fruit, was covered with blossoms 2 weeks after he had installed his unit.

The fruit tree in blossom

He has also noticed that the wild Saskatoon berry bushes are loaded with blossoms this year. Gil says it's going to be a berry good year this year!

Secondly, that week while he was seeding an oat field, his brother called him to warn him that a major thunderstorm was due to hit their area very soon, so he should head to his truck immediately. Gil, knowing that his unit would divert the storm away, continued to complete another circuit of the field before

heading to his truck. The storm parted and the sun was shining. He watched the storm clouds split to circumvent his property with no damage.

As of June 14, his oat field is already 4" high.

Gil installed his DPE Agriculture next to his rhubarb and he says it's growing like crazy. He says the stems are so thick, you could use them as a weapon!!!

A rhubarb stem on top of his DPE Agriculture.

Although Gil's DPE Agriculture has some of the new technology contained in the DPE Agriculture X, we expect even more amazing results from the DPE Agriculture X.

Gil Gunter, June 2024

****

I've had my DPE100 for over a year and a half and have seen some good changes as a result. I quizzed my gardener on his observations of my neighborhood, as he has a number of customers in the area. I asked if he had noticed any changes within a certain radius of my home since the DPE100 was installed (he's the one who dug the hole), and he said that he had. The weather patterns here are milder, and in general, the plants seem to be doing better – despite an unrelentingly hot summer last year when our available water for gardening was rationed to a third of what it was previously. We used to get destructive winds twice a year – in the fall and early spring – and that hasn't happened since the installation. My trees are also clearly healthier and more resilient, as are the neighbors' trees that I can see. I thought you'd like to know.

Thanks for the help, and I hope you are doing ever so well!
Holland, June 2023

****

I was very keen to install the DPE100, even in the smallest of backyards in an area where the power companies have completely taken over. Here, there are extra numbers of the monstrous power transformers humming very close to homes and any of the remaining commercial gardens. We installed the device on December 31, 2022.

From the fellow who dug the hole:
I think digging the hole was the start of the DPE's influence, as everywhere else I dug, I struck rocks. This meant lots more energy for me.

A word about the effects on nearby residents, from the same fellow who dug the hole: Sam had a stroke and had fluid in his lungs. I couldn't believe how good he looked after two weeks in the ICU. Just amazing.
Eddie had cellulitis and was hospitalised twice, as he had been 14 years prior. This time he had complete healing.

A word from the 'owner'.
We never own the land, and by-golly I am humbled to repay Mother Earth in this way.

For me, I laid down on New Year's Eve close enough to the newly installed DPE and felt its energy emitting around my head.

And so began the feeling of needing more sleep for several days – even whilst driving,
I had to pull over. I lay down in the yard beside the DPE and feel it through my feet, too.
The summer storms may have been lesser, but the rains have been soaking for good reason. Grateful to install this 'on the quiet', particularly in a very dense electromagnetic smog area. No hesitation to Defend Planet Earth.

Thank you.
'freshwater', March 2023

****

Dear Richard,

We have had our DPE Agriculture installed for two and a half months and have noticed a few things in our observations of the weather.

So far, we haven't had any violent rains. They seem to split as they come through and we have nice soakers. This morning when I left to run to town, I noticed the fog wasn't low to the ground within a mile of our home but, as I drove further away, it got thick – I could only see 100 feet ahead of me. When I came home and turned toward our farm, I could see a mile and a half ahead of me. When I looked toward the other three directions, however, I could only see for a few hundred feet. This is very odd because we live in a lower area that is usually worse! Even my wife found that odd! Also, all of our married children have had the flu recently and we haven't, even though we have been around them all.

My sleep has also been better since the installation of the DPE. I am excited to do some trials in the corn and bean fields this year.

God Bless from Ohio!
Scott Gaier, March 2023

****

I'd been meaning to write you for some time, as the initial reactions to the DPE were quite dramatic. The ongoing ones have been more subtle.

We'd been fully living here in Honey Brook, Pennsylvania for a few weeks when the DPE arrived. I'd dug a hole about half the eventual depth, so I just placed it in and leaned it against the side when it got dark. The next morning, my husband asked if I'd put "that thing" into the ground. He noted that his chronic pain and swelling in his fingers had subsided greatly and he didn't need to manually uncock his trigger finger.

I feel as though I had some "cleansing reactions" at first, but what's most noticeable to both of us is the sense of calm and contentment. For me, despite being very aware of all the insanity transpiring around the planet, I feel calm, hopeful and, often, borderline giddy. While I can't know for certain how much is the DPE and how much is just getting out of the city where we were living before, even my skeptical husband admits he's quite happy we have it.

Best regards and Happy New Year,
Marika, December 2022

****

The DPE Agriculture has been installed since October 2021. Our grow area is seasonal and does not start until May 2022. An indoor garden was planted in November 2022 with artificial lighting (LEDs) until April 2022. The indoor garden was a great success, giving us: cherry tomatoes, okra, green onions, lettuce, and green peppers. Room was an issue with this test garden, which limited the garden size. We were excited and looking forward to our outdoor garden in 2022.

All of the seeds used were organic, heirloom, store-bought vegetable harvested seeds and harvested seeds from previous organic gardens. The majority of our garden was planted indoors using LED grow lights and store-bought organic vegetable garden soil. The majority of seed packages planted gave a germination time of approximately 10-15 days.

The effects of the DPE Agriculture have enhanced this garden to the point of it being the best garden I have grown in the last 15 years. Its effects also have increased the yield of my neighbor's strawberries. He has harvested 35 lbs of strawberries so far this year. Last year, his strawberry crop harvested 20lbs. He has harvested 15 more pounds of strawberries this year (a 75% increase).

See the full report here.

Steve Sager, Canada. October 2022

****

I am very grateful for the DPE Agriculture. It feels safe to be around, especially in this challenging time.

We have a garden which is two-years "old" and we have been using the DPE Agriculture for over
two months now. Our garden has a lot of fences with ivy for privacy and added greenness. Before the DPE Agriculture, the ivy was full of lice. Now, it is so much better and growing quickly. I must say, all the trees are growing beautifully, and although it is sometimes hard to say if this is due to a good growing year or the DPE Agriculture, I definitely think everything is growing faster because of the DPE. I see it especially with our Quercus Ilex trees. These are slow-growing trees and they were not doing well in 2021, nor were our willow trees. Now, they are all doing fine. Sometimes we cannot keep up with all of the growing (like with our grass)!

We previously had some problems with our hew hedges, though most of them survived. A few did not make it, but they may have been too weak before the DPE Agriculture arrived. We also have a very small apple tree, which had lots of lice and ants on it before the DPE Agriculture came. I think the tree was so covered with lice that it was hard for the DPE to fix it. As of now, it only has three apples, but maybe the DPE needs more time to create an optimal balance. I think we need a little more patience here.

We've also had a lot of chemtrails over these last weeks. They happen almost every day. I can see the DPE Agriculture working and the blue sky beginning to appear, but I think this is another instance in which I'll have to wait a little longer to see greater results.

One lovely thing is that a large house hare has been coming around very often – and with a little one now. Also, we have begun to see more birds. It seemed like a lot of birds disappeared last year. Years ago, there were so many more birds. Slowly seeing them return gives me so much joy.

I cannot say a lot about the weather. It is hot and dry here, but we water the land because we have a lot of grass. We don't dare to water it less because our grass turns yellow quickly. Maybe next year we will see enough of a difference with

the DPE Agriculture that we can water the land less. Hopefully we will have less chemtrails then, too.

I think we need to have a little more patience for the real magic, but we are very happy with our DPE Agriculture. We feel very well – despite everything that they are spraying – and our garden grows very well, too. Also, I think we are having less mosquitoes. Every year I have mosquito bites, but as of now, I have had none this year.

So, I am enjoying the DPE.

I have worked as a controller at an agricultural farm for a year now. When I see the amount of money spent on pesticides, my heart cries. I would love to see that change and I think the DPE Agriculture could play a major role in doing that. Unfortunately, the owners are not conscious enough now, though I hope to convince them in the future. It would be lovely to see some good results with farmers who use the DPE Agriculture, and I would love to be in contact with them. We all need good biological food without the crap.

Sonja, August 2022

****

Hi Richard,

I have received testimonials from you for the DPE Agriculture and I thought you should know our experience with the DPE 100 here at our home. These tomatoes, potatoes, and strawberries were grown in containers inside our home this year!

Our flowers all over the property have the biggest blooms we've ever seen. This orange rose bush produced much larger blooms than in past years, and now we have a second bloom happening – this hasn't happened before.

Perhaps these great results are because of our DPE 100, but there is no way to know for sure. All I can say is that last year was the first year that we had the

DPE 100. We saw a difference within that first year, with results such as thicker foliage and grass growing in places it didn't previously.

This year, the visual results from the DPE 100 are even more apparent.

Stacey Gaiga, August 2022

****

Good results with the DPE Shield Agriculture that I installed here… The cherries were big – in both size and quantity – and the fennel was bigger, too. There were also far fewer parasites. This was the case with the grapes as well.

On top of that, we've been having a very hot season when, suddenly, a few days ago, we had a low temperature. The weather was supposed to cause great damage but this didn't happen.

We simply had a good, normal rain for a longer period of time.
The following happened nearby, inside the five-kilometer radius of my DPE Shield Agriculture:

A woman sent me this photo of her cherries because they are unusually large, but she didn't know why.

Giovanni, July 2022

****

Hi Richard,

A quick sharing of what I feel is the effect of the DPE Agriculture I installed a month ago. With our recent Greendale, Victoria – especially in regards to the strong West to East directional wind tunnel we often experience, which sadly resulted in two of our oldest gum and oak trees being uprooted or snapped in half last year. In anxious anticipation, each day I would wait, experience and observe as the wind approached and moved through and over the trees on the hill at the edge of the property. Then, surprisingly, ten to twenty minutes later, nothing.

Also, the rain would fall heavily and then slow down into a beautiful soft rain (almost like snow), and it was just enough to water the ground or top up the water tanks. And, of course, the sunshine would then follow.
This pattern would continue throughout the above weather forecasted day.

I cannot help but acknowledge and naturally Thank the DPE Agriculture each morning when I walk past and, in so doing, make a very personal connection with it.

Thanking You, Nicole, July 2022

My son and I live outside Santa Fe, NM and when this State was struck with disastrous wildfires, I decided to purchase a DPE100 to assist in the regeneration. We are in what used to be our "normal" monsoon season. We had gone into the city for some errands and were on our return home when the skies opened to a very severe cloudburst and visibility was almost nil. I wondered whether the 1-mile mud road we live on would also be affected. My son grew up on this road with his father who recently passed, so he knew how bad it could get. To my amazement it was not, and though rain was coming down here, it was mild and it had not turned into the hazardous conditions known in the past. I have been waiting for something severe in order to see if the DPE100 lived up to its wonderful expectations and now I had proof. God bless the inventor and his team for its creation as I now have proof of its effectiveness. Thank you for this!

Raya, July 2022

****

Dr. Presser,
I have my DPE Agriculture installed on a ley line on our farm in Northwest Iowa. We came through a hot, dry, and windy period that lasted two to three weeks. We have subsoil moisture, but the excessive heat and wind were stressing the crop during the peak heat of the day. Normally I would have been tense watching my crop endure these conditions, but

it seems the DPE Agriculture taking the EMF pollution out of the equation in my area helped me as well as my crops. I was able to stay calm and confident that the good lord would send moisture when we needed it, and he did. On June 25th, we were blessed with two inches of life-giving water.

What was interesting to me is the event that gave us the rain started just west of a DPE Agriculture installed just a little west of a small town to my southwest. The rain ran in a very narrow band toward my farm and onward to a neighboring county, which got three to four inches of rain in a very short time, causing flash flooding.

P.S. I helped another neighbor get his DPE Agriculture installed Saturday morning. I would think this unit would also help improve the atmospheric conditions in my region and stabilize our weather.

Kendall Roerman, June 2022

****

We've had the DPE100 for almost a month; it seems like the flowers in my planters are more vivid. Strange but true. And our lawn is green velvet. Remember, we live in Arizona! The grass is native grass, but we have fertilized it and we always water it. Nonetheless, it has never looked this luxurious.

And the storms are interesting; we are now having our monsoon rains, which are interesting to say the least. At least this year we are getting a good monsoonal rainfall. I have always been concerned about the lightning because of livestock and living so close to the National Forest and forest fires. I can watch the storms on radar. It just seems like the bad storms part like the Red Sea and go around us. We have had no severe damage. At first, I was concerned we weren't getting the rain, but it has been coming in quarter-inch daily increments and soaking in, which is awesome. A neighbor down the road did have damage from the hailstorm. She lives about five miles from us. We just had a few pellets of small hail during a rainstorm, but it caused no damage. Even if the horses had been out in it, it would not have hurt them.

I'm also trying a small garden in pots with beans, squash, and tomato plants – just because we have our DPE100. We have named it Thor Majestic! I've absolutely never been able to raise any vegetables. We will see what happens now.

Also, one of the reasons I got the DPE100 was because the piñon pines were slowly dying from lack of rainfall. With the nice monsoon rains, the brown needles have fallen off and the new growth is looking beautiful. Of course, it is natural to happen in a good monsoon season, but these just seem particularly happy. I am loving that the rains are coming slowly and sinking into the ground. Doesn't help if it just all runs off into the rivers!

Rose, June 2022
****

I agree with you that unseen benefits for health come along with the DPE. I have had great success with our plants – both indoor growing and, now that we are in the season here, outdoor growing.

Our cucumber seeds germinated in four days, which was supposed to be 10 to 15 days as per the seed package. The rest of our seeds (except our peppers) were germinated within a week.

All of our plants are now in their home for the season as of May 30th and we have already harvested three zucchinis and about 10 cucumbers, which we pulled yesterday. All of our garden looks healthy and happy. This is the best garden I have had since I started putting in gardens yearly 10 years ago.

Also, it has been a cold start to our season. We have had an average temperature of 15 degrees Celsius for a daytime high and a low of five degrees average.

We are about to get up into the upper 20s by the end of the week, so I am excited to see how the plants do with some nice warm weather. I will send you some pictures soon.
Update: We just harvested 13 ready cucumbers from three plants growing in 10-inch pots out on the lawn.

Steve, Canada, June 2022

****

Good day Richard,

I am happy to report that in my second year of my vineyard, the crop which is not supposed to be very big is quite huge. We should be able to make wine this year, which is very unusual. It usually takes three to four years. Also, we even had grapes the first year, which is unheard of. Additionally, the fruit on our citrus trees has increased.
Thank you so much.

Sherry, June 2022

****

Every single winter storm has been evaded thanks to our DPE100, and I believe the count is up to six or seven major storms this year! This has been a severe

year for weather here in British Columbia, Canada, and my husband is dumbfounded! He had some skepticism, but he doesn't anymore!!! Normally we would have had to clean the yard of many tree branches from the forest surrounding us many times already, and this year, maybe two branches in total!!! It is a miracle!! Even the closest town, which is approximately 10 kl, did
not flood this year… again, a miracle!

Stacey, January 2022

****

I think we finally got some results with the DPE100 that we could actually see. We installed the DPE 100 on Memorial Day of 2021. It has been very dry here so my husband started filling the tube with water once a week. December 15th was the day the storms flew by here at record speed. We weren't home, but our son has his welding business in our shop building. He received a phone call that there was a tornado warning for the area, so he went outside and saw one coming our way. He and his hired man ran to the house to go to the basement, spent about two minutes there, came back up, and it was gone. Our neighbor to the northeast happened to get a video of the tornado, and it moved north. It didn't bother any of our neighbors' places that would have been in its line, but it did hit an irrigation pivot just out of range of the DPE100. So thankful we have that. It's been well worth the time it takes to fill it once a week.

Renita Farrall. Nebraska, USA, December 2021

****

Winter wheat crop:
No rain during the growing season. The wheat came up two weeks earlier than normal and
produced a normal crop yield despite there being no rain.

Summer corn crop:
Annual rainfall was 15" below normal (normal is 32")
Yield was 30% up on the previous year, despite the reduced rainfall, this despite a significant root worm infestation, which normally reduces yield significantly.

Other observations:
The farm animals are more friendly. The aggressive cows have calmed down.

Natural fauna showing up that haven't been seen in years – pheasants, bobcats, etc.
A damaging hailstorm hit all of the neighbours, but there was no hail over the DPE
Agriculture zone.

No one in the multi-generational family (grandfather, adults and families of children) on the farm have been sick in the time it has been installed.

From a US Farmer, November 2021

****

Dear Richard,

As you can tell, it has taken me a long time to respond to this, mostly because I really don't want to make any claims about anything when I am not 100% certain. But after about one and a half years with the DPE100, I now feel confident about certain changes that I have observed, and I would like to share those observations with you. While I am not sure about any weather or storm-related influences the DPE100 might have had here, and I also can't tell if any family members can actually feel the energy, I am absolutely certain by now that the plant growth around the DPE100 has definitely been affected greatly.

For years, some of our plants had struggled in shady spots or with soil that was too stony and not at all rich. Over the last year, however, many of them have grown greener, taller, and more beautiful than ever before! Specifically, I can tell you that for about 20 years we have had a rhubarb plant in our garden which came back every spring with the same number of average-to-small leaves. And that was just what it was, every year, until this spring. This year, the rhubarb plant grew flowers last month, and the whole plant is now so tall that it is taller than me!

There are many large leaves, and it looks really healthy and green. I have never seen it like this before, and many of the other plants are also growing greener and taller. With the rhubarb plant, the comparison is the easiest because we never changed anything in the environment around it, except for the DPE100, and I remember how it looked for so many years.

All in all, I would say that most plants (including a small tree) in our garden look much better after a year and a half near the DPE100, and it also has been a lot more fun to do gardening under these (new) conditions!

I don't know how many other testimonials you have received by now – there must be quite a few – and so I am sending this as another addition to your collection. I am sure that all these observations are like small pieces of research that paint an interesting picture and can shed some more light on the workings of this wonderful new technology!

Thank you for making it available!

Annette, June 2021

****

Richard,

I refilled the hole with water and soil so it was basically mud. Great contact. Then I left a moat at the top, and I just spill water in every couple of days to keep the entire column moist. I live in a place (California) where we have no rain for six months of the year. To me, the DPE100 requires a tiny bit of attention (thirty seconds every couple of days) to be most effective. I'm less of a fan of pouring water into it although that will work for sure. By the way, I immediately noticed a change in my consciousness upon installation of the DPE100. All I can do is describe it as my mind/attention was 'crisper'. I have it installed within four feet of my head when I'm asleep and it seems to be a perfect location.

Welles, October 2021

****

Hello Richard,

I installed the DPE100 on the North side of my house this past Saturday the 11th of April. There was a very large storm system approaching the North Eastern United States, due to hit our area late Sunday night (Easter Sunday) and all of Monday, the 13th. The forecast was for very heavy rain and strong winds all Monday.

I awoke Monday morning to heavy rain and mild winds gusts. As the morning progressed, patches of blue sky appeared above our house and around the immediate vicinity. This continued throughout the day and by 3pm the rain had left and we were left with mild breezes and a decent day. I spoke to several people in the area, who were surprised that we did not get the bad effects of the storm. Yes, I replied, I guess we got lucky! Also, I would like to note that the national weather service was calling for localized tornadoes in our area. None materialized.

We did get some heavy cloudbursts which lasted maybe 10 minutes or so, then moved on, but NO violent weather.

I am absolutely convinced the DPE 100 shredded portions of this storm to bits in our immediate area. This is ground-breaking technology.

I would also confirm the calm feeling that seems to permeate our home. Everything used to feel energized, but now it seems to be more tranquil. I am so happy I purchased my DPE
100. At least I have helped several 100 people in my area of coverage and they hopefully are living calmer lives.

I write this letter as a testimonial to others who may be considering purchasing a unit. If you are "on the fence", as the saying goes, take the plunge. You will not regret it. I will continue to update your customers as the weeks and months go by.

Sincerely,

Mark Harrison, April 2020

****

Dear Richard,

As you know, I have a DPE100 in the ground near the FT Lauderdale International Airport. My good friend, Charlie, lives close to the airport. He practices alternative medicine and he, along with many of his patients, is very sensitive to EMF/RF frequencies.
I thought Dr. Charlie's would be a good place to test it.

It was easy to plant in the ground and we immediately noticed a different feeling inside his condo unit. Charlie said that it was a feeling of stillness and calm and sometimes he felt like yelling just to see if he could break the calmness. Several of his clients noticed it, too, and one said, "Hey Charlie, what have you done? It feels different in here." He was not complaining. I knew what he was talking about. I don't often feel those subtle energies, but I know something good is going on at his condo. I live in an area that often gets hit by extreme weather conditions such as cloudbursts, tornadoes and hurricanes. I know that the weather can be manipulated, energized and even guided. I was looking for insurance, something that offered some protection and I have found it in the DPE100.

Let me explain. There was a cloudburst in February. I was going to visit Charlie and the rain was torrential. Cars were stalled on the Interstate highway and flooding was everywhere. It was slow going but when I got about 1.5 miles from Charlie's, the rain almost completely stopped. It was just a slight drizzle when I got to his place. I stayed there for two hours and then left. I got about 1.5 miles away and the downpour started again, but not at Charlie's!

Here is something else that was encouraging. I planted the DPE100 next Charlie's condo and a large, old bush. After a week, we noticed that the bush was sprouting new growth, and it seems that the shape of the bush has also changed. The branches seem to be growing out of the shade and moving into a position that provides more direct sunlight. I almost forgot to mention this - Charlie, can see more stars at night. We almost never see stars around here. They get lost in all the stuff that is being sprayed day and night above us. Pretty amazing.

I give the DPE100 five stars *****. It is a winner!!! Thank you.

Harvey April 17, 2020

<u>Update: April 27 Dear Richard,</u>

I have placed the second DPE100 in the ground at my condo. It is in an area that people sit around to relax and get sun. In the evening the mosquitos come out in force. I have not seen any. I will sit down there tonight without a shirt for an hour or so. If I don't get attacked, I will be talking with the folks at the city hall. The city pays a lot of money to spray those mosquitos. I'm going over to see how they handle those contracts. Going after the mosquitoes could turn out to be a huge big deal in Florida. It also should be easy to demonstrate how

effective the DPE100 is in getting rid of that nuisance. This is definitely worth following up.

I feel like there is a calm stillness in my apartment. I am on the 9th floor. They were predicting severe weather, including tornadoes but it was pretty quiet here last night. Stay well and safe.

Sincerely, Harvey

Harvey subsequently videoed the "blue eye" above his DPE that several have reported. Here is his brief video of this phenomenon.

****

As for the big storm, the rain came and gave us 2 inches, with double that and more, higher up the mountain, but the warning for us here in town was for a wind storm. It never came.

We have had a couple of wind storms this winter, but not last night, and the warning was just for last night and this morning.

Thanks, Richard.

Martha, January 2021

****

Hi Richard,

Have had it in the ground nine days. Had the second mother of all storms. Weather Channel radar showed us in purple and that color is new. Highest threat level. No damage at the farm. Neighbor in front of me lost a chestnut tree. Looked like it was put in a blender. Nearby eight 100-year-old pecan trees and no damage at the adjacent little farm... Nothing on my 78-acre farm was damaged. Six miles away a huge area near the county road had hundreds of big trees toppled and more than 500 trees looked like the blender got them at about 10 feet from the ground; very strange. The Weather Channel predicted lots of rain with the storm but we got about an inch of slow rain, just like with the storm last week.

Storm damage to the county from Sunday night's mega storm was over 100 million dollars, just in this county!!! Pictures in the local paper show damage everywhere and one man was killed by a falling tree. He was a PhD at the local college. The DPE was obviously working.

There are two more weather systems that are predicted to pass over here in the next week. Both are predicted to bring severe weather and lots of rain. I will keep you posted.

Update May 1, 2020
We have now had four mega storms in three weeks and not one bit of damage to the farm. Others in the county have had roofs torn off and in town seven miles away, not a single street without trees down and severe damage to commercial buildings, as well as homes in the town. As I drive thru town, I am very blessed to have the DPE 100. Dr. Bill McFarland

Update May 10, 2020
Had another storm Friday night and it broke up over me and I got a little wind only. Wish I could afford the big unit. That would scare the weather mod guys.
Your friend,
Bill

Update August 30, 2020
I look at thousands of Pecan trees every week after a strong thunderstorm in this area. Big tree branches down almost everywhere. I have three big pecan trees in my yard and not a single tree branch ripped off since installing the DPE100 in the late winter at my farm.
Outstanding crop of apples, pears and especially scuppernongs (grapes) this year. Thank you, again.
Bill

Bill's DPE100 update September 16, 2020 in the midst of Hurricane Sally
All is well here. 35 mph wind gusts for the last 24 hours but lots of rain and more to come tonight and tomorrow. Not excessively hard rain here and no flooding at the farm. Office is two miles away and all is ok here, also. People 40-50 miles south of here and on the coast not so lucky. Over 500,000 without electricity and many without phone service. Smart people do not build or buy when the elevation is 2-5 feet above sea level. However, I know some really dumb ones who have lost all their cars, homes and anything else of value because they had to live near the ocean.

The blue top on the DPE100 is a great sight when I walk up the hill at my farm. No damage anywhere on the farm or close neighbors who are benefiting for free. Hope the rain clouds break up later today. Will keep you posted.
Your friend, Dr. Bill

The next morning:
The back end of Hurricane Sally literally broke into multiple very small isolated showers a few hours ago over this area. Forecast changed to light rain, now, and also partial sun all day (Thursday). Weather radar indicates at 1am, thirty or more small showers over a wide area here in south Alabama. Absolutely no flooding or ground erosion at the farm. No pecan tree limbs down or oak tree limbs down anywhere on the 78 acres. I can also report that there is no damage or excessive rain at my office, which is about 2 miles from the farm. There is a tree line 40 feet behind the office and no damage and no fallen limbs on or near any of the three buildings at the office complex. I plan to get a second unit in a few months to extend coverage on an expensive and very large barn I had built 17 years ago.

The barn is almost a mile from the current unit. Today's cost for a new barn would be out of my reach. The DPE100 is really very cheap insurance, in my opinion. I am also extremely concerned with EMP issues along with 5G and I believe those concerns are a non-issue today. It is hard to explain the calm feeling I feel at the farm. I almost forgot that the pecans are at full maturity on the farm, almost two months early. My neighbor in front of the farm also has full maturity on his seven-hundred-year-old pecan trees.
Richard can explain what is happening with the pecans better than me. Thanks to everyone who has worked on the DPE 100 project.

Dr. Bill McFarland NMD aka silver man prepper

****

Hello my friend, my neighbour called me after a year. He has a wine grape vineyard and he remembered what I had told him last year about installing the DPE. He said the vines grew better and with very few pests. There was a huge increase in ladybugs, which feed on the parasites, and this has not happened for many years.

Furthermore, no water bombs or storms with large hailstones occurred, which allowed the vines to grow strongly and unhindered.

There has also been a change in the nesting of birds. There are many more swallows, but also a change in their habits. For the first time in his life, he saw a cat playing with a magpie.

A big hug!
Giovanni

****

Hi Richard,

When we finally installed it, we took careful note of how we (a lady who lives here and me) were breathing. Both of us were able to breathe more easily within two or three minutes of installing the unit, which rather surprised me. I didn't think it would be as quick as that.
I have got a bit of a chest problem and it's been helped enormously by taking a dessert-spoonful of overproof rum. Just as the day changes into night, I can feel the chest tighten a little bit. Now, I don't get that feeling. I'm still having the rum, but since that unit's been installed, that tightening has gone. I'm virtually a teetotaler, so drinking overproof rum, even a small quantity, was quite a learning experience!!!

The other thing that's most remarkable is that the animals here are quieter. We have horses and dogs and their behaviour changed overnight. The whole place is more placid.

Also, a person that lives in the same house here had had a very bad fall from a horse 18 months ago and was still walking quite stiffly and with great difficulty. Everyone's been giving a bit of a hand and have done what they can to help, but since the DPE 100's been installed, something's happened and his body is much looser. So now we're getting somewhere and he's walking much, much better.

Although this is difficult to show to others, my intuition has improved dramatically since the DPE 100's been installed.

Robert, April 2020

****

Dear Richard,

It is about a month now since I installed my DPE 100.

Two days after, a storm with strong winds and hail tried to visit us from west and bent to North at the hidden border of the DPE. We had a gentle rain instead. The phenomenon repeated itself several times during the month, with drizzle when it was pouring rain nearby.

But the most fascinating is the repeated formation of a blue eye circle in the sky when everywhere else is still strongly cloudy. The first place to dissipate fog is above my property. So, it really affects weather and creates a kind of microclimate.
I have noticed that plants are growing faster and healthier. The man who is taking care of
the vegetable garden doesn't understand what is happening.

More birds and new species are coming as well.

I have been trained in Biogeometry and checked the vibratory qualities of the DPE. It does counterbalance strongly the Geopathic discrepancies and installs a positive and healing field. It has all the same color frequencies and qualities of power places and healing spots, plus a strong component of blue emanating from the Earth

I have noticed that it has a soothing and comfortable action on positive people, but negative ones don't appreciate it and leave. Perhaps, with time, they would harmonise as well?

I am very glad to have found this device. It would be nice to have an intermediate model between the DPE 100 and its big brother (DPE Shield). 15 kms would be ideal (and maybe more financially affordable) to install a stronger microclimate and create a positive influence to the community.

Best regards,
Thierry, May 2020

****

Hi Richard,

My mother has said that she is no longer suffering from heart palpitations like she was prior to installing. A friend of ours who lives further up the road, closer to the 5G tower, has noted the same as she also had heart palpitations, but not now.

Kind regards,
Tracey August 2020

****

Hi Richard,

Well as you can see in the news, Hurricane Isaias is causing lots of damage up the East Coast of USA. It was still a Tropical storm when it came by the Florida East Coast this past Saturday night and Sunday day, August 1 and 2, 2020.

I took the precautions of tying things down that might fly around and covering a few plants, but that was all.

Then I waited....

There was very little wind, and very little rain.

When the TV Weather news came on... the reporters were scratching their heads, because the storm came straight up the Florida East Coast, but when it got to my area of Lantana and Lake Worth, FL, it bent around it to the East, like a curve ball in a baseball game, making a perfect half-moon bend before it returned to the Coast and got back on track.
Now I realize my DPE100 goes out only 2 miles around, and I am 10 miles from the Beach, and the storm center was about 30 miles off the shoreline.

But the DPE100 also goes up 200 miles into the air, so I have to believe, that it did something... a wonderful miracle trick... and caused that curve ball to protect my area. Blessings to all,

Rev. Merriam Joan Handy

****

Hi Dr. Presser,

It has been interesting to notice the effects on our environment since we installed our DPE 100.

We feed a semi-feral, older beautiful feline that has taken up residence on our back porch. During the warm weather months, we have had a high failure rate beating small black ants to her left-over food left twice a day and picked up within an hour. Putting her food bowls in larger flat bowls surrounding her food with a moat, has been pretty effective.

From day one, the small black ants disappeared! The small moat is no longer necessary!!! Our home is ruled by two, older, female felines. Both seem to be calmer, and more playful with us and each other. The energy in and around our home, does seem to be calmer.
Our bird feeders are being emptied faster than ever. It seems our bird population has exploded!!

These are just a few observations. Thank you.

Christine, A happy customer, July 2020

****

Hi Richard,

I have had the DPE for a year and a half and I continue to find that it creates an oasis of well-being, which makes a difference that is easily perceived when you leave its coverage area.

In fact, if a person has chronic pain, which may arise from different pathologies, they can verify a considerable pain reduction when they are inside the coverage area. Even my parents, despite being very old, are drawn to visit me much more often because they feel much better and experience a much more serene state of well-being.

A big hug!
Giovanni, February 2021

****

Hi Richard,

We're totally loving what the DPE is doing for us and wishing we'd gotten it much sooner!! You were right … the installation was no big deal. And I did follow your suggestion and painted the protruding piece. Blends in with the surroundings and is much less noticeable.

Thank you for that!!

Warm regards,
TL, November 2020

****

In November 2020, two DPE100 customers, Dr. Bill and Rev. Merriam, joined me on an Internet radio show to share their experiences with their DPE100. You can listen to the recording at this link.

After the show, Bill shared the following with me:

I have been here 20 years. Every year, the first frost with a 30-degree night for 2-3 nights is always around the 20th of October and everyone starts feeding cows the next day until the end of March. THIS year there has not been a frost at the farm or anywhere near here and it is the 22nd of November??? Bill

****

Hello Richard,

We have had our DPE 100 for about 3 weeks now. One of the things we have realized is that we are sleeping much deeper. Every month we work with a quantum physics energy healer and he measures the level of our adrenals. At our regular scheduled appointment (after only 3 weeks of the DPE 100 being installed), he checked our adrenals and saw positive increase in both my husband and myself. He said he has never seen this level of increase in just one month's time; it usually improves at a much slower rate - if at all. I then told him about the DPE 100 - we are excited to see as time goes on all the health benefits!

Thank you for making this product available, Richard!

Carol

A later update…

Hi Richard,

I wanted to send you another update for our DPE 100. It's been two more months since the install and we continue to see an increase in positive results. My spouse and myself had a second check-up (since install) from our practitioner and, again, he was impressed by the increase in our numbers that measure our health. Our adrenals measured more

improvement and are some of the highest he has seen in our age range. Sleep continues to be amazingly peaceful and it is rare that we don't have a great night's rest. Our garden is also showing changes. We are in Minnesota and normally by this time of year, the tomato plants are dried up and done producing any new fruit. Right now, ours are still producing fruit and the branches are very healthy and full of lush leaves.

Here is a photo taken of the tomato plants today - we have never had them looking this wonderful so late in the season (October 9, 2020).

Thank you for making this amazing device available.

Carol

****

Hello Richard!

We have noticed some benefits from the DPE100:

- our immediate environment and air seem to be more vibrant and energy-charged
- the weather is more moderate no severe thunderstorms
- lots of magnificent rainbows when thunderstorms are in the vicinity
- we have more of a feeling of well being
- better quality rests and sleep
- greater appearance and activity of local fauna: birds, squirrels, rabbits, chipmunks, ground hogs

After only 1 week from installation, we can tentatively conclude that the DPE100 seems to be working.

Paul H.

****

Hello Richard,

I wanted to share these photos of the "Blue Eye" above our home in Pennsylvania and specifically the Chemtrail being torn apart by the DPE100. We have not had Chemtrails in our area for approximately 2 weeks, a welcome surprise. I was actually outside cooking on the grill and when I looked up. I was surprised to see this line trail. I must say that when I first saw the trail it was thicker and more defined.

It very quickly was dispersed, to my surprise. As those who are aware and watch these horrible abominations, they gradually spread out in the sky and leave it a milky white, blocking out the sun. Not so today! The trail was dispersed unlike anything I have seen before. I am firmly convinced the DPE100 was directly responsible for this.

I urge all people to save your money to purchase one of these units. It may just save your life in these uncertain times.

And yes, I have a consistent "Blue eye" above and around our house and parts of our small
city near the house.

This device is no joke. Thank you to our Brothers and Sisters for this technology

I know my DPE100 has given me a peace of mind, both literally and figuratively. And the birds and squirrels and rabbits, oh my, how happy they are! The birds are constantly singing and chirping! I saw a rabbit sunning himself between some flower beds and when he saw me, he barely moved as I slowly approached him. He was so laid back I thought he was injured. He finally got up and hopped away, but I have never seen a rabbit so passive! He was just soaking in the rays and enjoying life without harmful radiation and 5G bombarding him!

What a treat this device is.

With love and respect,
Mark Harrison June 18, 2020

****

We installed our DPE100 about a month ago on our country property. We are not in an area where we experience hurricanes or severe weather disturbances, other than in the wintertime with more severe snowstorms or snowfalls. We have just entered our Fall season. So far, we have noticed a greater calmness and serenity on our property, along with a feeling of safety.

We have also noticed a huge difference when we re-enter onto our property; a feeling of groundedness and centeredness – it's as if we stepped into our own invisible bubble of sanity and harmony, out of the world of confusion and chaos that is going on in the world and our cities.

We have noticed more birds around our home. Our guests who have visited our property have also reported feeling peaceful and harmonious; feeling very comforted. We're sure we'll notice more as we progress into our winter months. We feel most delighted with our DPE100 investment.

Dr. Sabina DeVita: October 27, 2020

****

Feedback from Caroline Balanda February 2, 2020

Hello Richard,

Just thought you would be pleased to get this great feedback; to me, it is amazing. We have had a really bad infestation of mosquitoes. Our whole island, by about 3:30pm, if you were outside and the mosquitoes liked your blood, it was just terrible and the bites would last two weeks, scratching and itching awfully.

The first 12 months we were here, they were not a problem but for the next 4 years it was always "get indoors" because even though we used to spray insect repellents and special candles, it was never enough.

Guess what? Last night we sat outside and there wasn't one!!! I texted my neighbour, and he said that he didn't notice any, either, and believe me you can't miss them!!! He was very excited.

We have a beautiful park right on the border of where the DPE100 reaches, so I can't wait to see if it has been cleared, too, as it is full of animals and the council puts in a huge amount of work to keep it beautiful.

Anyway, how wonderful is that? Have a good evening

Caroline

****

February 4, 2020 Hi Richard,

Yesterday, 3/2/20, storms were predicted for south-east Queensland and, as usual, the massive sheets of lightning were coming our way. We could see them from our dining table and I was starting to get very nervous as they sweep around and come down and head straight down the river, and all hell seems to break loose. Very scary. The last time we got hit, it was $28,000 of damage, let alone the fright.

This time we watched the sheets of lightning come close to our area and it seemed to just quieten down and dissipate after a great light show.

Across the river from us, we could see the lightning way behind the houses, which usually
ends up in our front yard. WELL, GUESS WHAT!!! It just settled down and didn't come any closer. Amazing!!! Was it just an unusual storm or did it stay out of our DPE ZONE??? However, all I can say it was different from what has happened before with the summer storms.

We sure will be taking notice when the next one comes. Happy day

Caroline

Also, I noticed, not just over our area, but a change in our clouds in the sky over our city. Is this due to the DPE??? The clouds over the prior months during the fires really disturbed me as I had never seen such dense thick clouds over the Gold Coast so consistently, and it just didn't seem like it was all from the fires.

I would go out and look every day and it didn't seem to change for quite some time. Then they suddenly started to thin out, the density was shifting and the atmosphere seemed like with a feeling that everything is becoming OK, whereas before there was a very uneasy feeling about it all.

So, the clouds finally lightened up, we had a lot of rain but not too much of the destructive winds, a bit of flooding but we sure have had a lot worse. The lightning has definitely settled down. However, is this just what has happened this year and so it was normal or was there really some sort of, to me, big change for our February weather??? I don't know; only time will tell.

I have been hanging onto the center rod to clear myself quickly of energy, etc., that is not appropriate for me. Also, I made a bed of cushions right next to the window where the DPE is installed. Every day I rest and read there for an hour or two to help my body heal from a disease.

March 10, 2020 update

We haven't had any damage since we installed the DPE, plenty of heavy rain but no flooding, hail or lightning. Every previous year we have had really bad storms, lightning, floods and super strong winds for this time of the year but not now, isn't that fantastic; this is so different to what it has been since we came here over 40 years ago. I will take a photo of the outside as it is now and it is very beautiful and not scary at all like the past years.

Most importantly, the DPE is very effective if I rest near it for about three hours and that brings my body back into balance that equals body comfort

Extensive new plant growth fostered by the DPE 100

View of the calm, rainy outlook

****

Hi Richard,

My reasons for acquiring DPE 100 was firstly for providing environmental balance and protection.

There has been an increase in bird activity, leaves on all trees and shrubs are healthier looking, and the occasional Monarch butterfly hovers over the device. Also, the mosquitoes have not been as prevalent as they used to be. Other than that, I do not have any before and after points of reference to compare against, such as extreme weather conditions being less so or energetic interferences.

Kind regards,
John

****

The following are from the original verification in Italy:

Davide, aged 54, lives in Sardinia (Italy) as a building contractor, and is a highly educated man.

For 25 years he has been suffering from uncontrolled tremors and sweats that disrupt his sleep at night. He tried to solve the problem from the medical point of view by spending large sums of money on visits and neurological therapies but without success, and his condition continued to worsen, and this was creating big problems with concentration in his work.

The inventor of the DPE 100 immediately understood that the cause of the problem was electromagnetic pollution; in fact, the person has been living in the same place for 35 years.

This pollution is caused by stray electromagnetic currents combined with geopathies. So, with the help of the Engineer Prof. Elio S. electronic engineer as well as an industrial electronic expert specialized also in electromagnetic pollution, he went with the inventor to do a verification of the environmental situation and see how the DPE 100 interacted with electromagnetic pollution.

A small hole was dug and the DPE 100 was installed, and the device filled with water. A drastic reduction in electromagnetic pollution values was noted and a further confirmation of the reduction was when Mr. Davide confirmed that he had slept beautifully and without tremors for the first time, something that had not happened for years.

****

Two children of Francesca T. from Veneto (Italy) presented classic radiation burns, where the detachment of significant skin portions occurred, with severe pain, insomnia, etc. The parents had taken them to the best specialist doctors throughout Europe without finding a solution.

After many difficulties, the father happened to meet the inventor of the DPE 100, who immediately explained to him that his children had damage due to radiation exposures and that with a portable version of the DPE 100 with special ground connections, it could immediately solve the problem. Indeed, within 3

days the boys had returned to normal. Needless to say, the parents were skeptical at first because they did not know that high-voltage electrical cables were running under their house, but the strongest emotion was seeing their children completely restored. Their feeling of gratitude was truly profound.

****

Testimony of Claudio L. in the Lombardy region (Italy).
On 11 June 2019 a hailstorm with hailstones of 4 cm in diameter caused considerable damage in the villages near Lucca, but in the area where the DPE 100 was positioned, only rain occurred.

A witness was amazed to see the circular coverage area of more than 1 km radius produced by the DPE 100, outside of which large hailstones fell, causing widespread damage in the entire area outside of the DPE 100's protected zone.

****

Testimony of Giovanni L. in the Puglia region (Italy).
He could see a positive change in the climate; more harmonious with less temperature changes, the sky clearer, the daylight different and the air has become lighter and cleaner; different.

A surprising finding was that the bad smells of a farm with 300 horses, 700m distant and those of a farm with a thousand cows a further km away, disappeared.

An increase in sleep quality and consistent strengthening of the immune system occurred after one month.

Minimum stay of chemtrails and their displacement outside the area of the DPE. An increase in sleep quality.

He also noted a considerable reduction in the number of predicted extreme weather forecasts and those that actually occurred. It is surprising to see, again, the thunderstorms we used to see as children and that we had already forgotten.
Although heavy weather was forecast with hail, the meteorological situation was moderate over the entire area of action of the DPE, but outside the area the expected meteorological situation occurred.

****

Testimony by Daniele G. in the Emilia Romagna region (Italy).

He also confirmed the different and positive meteorological situation within the area of the DPE 100. The different air quality, the better quality of sleep, the decrease in stress and the feeling of living as in a "protected" area. Normal rainfall occurs, unlike the forecast weather.

****

Motivation
The reasons for my purchase of the DPE are multiple. Of course, the protection from 5G and extreme weather events are upfront. But also, the potential health benefits and last but not least the contribution to restoring health to Mother Earth. And I also am an early adopter for new technologies, so I 'had to have it '.

Results
I earlier reported a noticeable improvement in sleep quantity and quality. This has eroded a little because I have many restless nights, due to the heavy

energies around us. Sadly, the DPE cannot save me from that. If I sleep, however, the sleep is deeper and I feel more rested in the morning.

I earlier reported on the reduction of the smoke and smell of the yearend fireworks. Within 30 minutes all was removed.

As for the several healing wishes I have, it's probably too early to be able to get real results. I feel that the DPE, the Advanced Technology 7 Health Pad and the NANO SOMA® together are a beautiful mix that will work its wonders later on.

That's all for now, Richard. To be continued.

Love from Monique

****

The DPE 100 creates a zone of about 500 metres in radius where nature responds very positively.
Here is a summary from my Italian friend:
I explain now why and my experience.

I planted a vegetable garden and the plants grew luxuriantly, and this allowed me to have an excellent survival rate of those that I planted. However, the most amazing factor is that the DPE has made their immune system strong to such an extent that they are almost completely protected from parasites. Caterpillars and other pests have always been a problem in previous years.

Another very important factor is that I only watered when I planted but the plants grow and develop as if they received water every day.

Also, I noticed another strange thing: Usually when other "weeds" grow next to the vegetables, it is common practice in agriculture to eradicate them because they take nourishment and water from the vegetables. When I tried to do this, the nearby vegetable garden started to dry out, as if these plants were now more sensitive.

A month ago, I put 10 hens in an area near the DPE. After the first week, they became more docile. After a month, they approached to be caressed, but the most interesting thing is that the breeder who sold them to me told me to cut the wing feathers or otherwise they will fly away. I didn't want to cut them and left them the choice to go away or stay. They all continue to remain.

Even the eggs are bigger.

Giovanni
